**Notification of PFOA/PFOS Substances in Water for South Montebello Irrigation District**

*Este aviso tiene que ver con el agua potable proporcionada por el South Montebello Irrigation District, si esta compañía de agua le proporciona agua, comuníquese con la oficina para obtener la versión en español del aviso. (this notice is for water provided by South Montebello Irrigation District, if this company provides you with water please contact the office for a spanish version of this notice)*

The purpose of this Notification is to inform you on the presence of perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) in the groundwater that is served to our customers. Following mandatory monitoring required by the State Water Resources Control Board, Division of Drinking Water (DDW), it was determined that the response level for PFOA has been exceeded for **some of our water wells**. The notification limit for PFOS is 6.5 parts per trillion while the notification limit for PFOA is 5.1 parts per trillion. The Response level for PFOS is 40 parts per trillion and for PFOA is 10 parts per trillion.

Below is the test result conducted on South Montebello Irrigation Districts wells.

Well #	(ng/L) or (Parts per Trillion)	
	PFOA 4 quarter Average	PFOS 4 quarter Average
<b>3</b>	<b>11.5</b>	22
<b>5</b>	<b>13.75</b>	19.75
<b>6</b>	<b>10.93</b>	23.25
7	5.925	18

PFOS and PFOA have been extensively produced and studied in the United States, only recently companies have been phasing out these chemicals in their products. They have been used extensively in consumer products such as carpets, clothing, fabrics for furniture, paper packaging for food, and other materials (e.g., cookware) designed to be waterproof, stain-resistant or non-stick and they have been used in fire-retarding foam and various industrial processes. Currently PFA's (groups of chemicals that include PFOA and PFOS) have been detected in ground water throughout Southern California and are being thoroughly studied to determine the potential health effects. Based on the current evaluation of recent human and animal toxicity data, **large amounts** of exposure to PFOA and PFOS may result in adverse health effects including hepatotoxicity, immunotoxicity, thyroid toxicity, reproductive toxicity, and cancer. The population at most risk to these effects are pregnant women, children and the elderly.

South Montebello Irrigation District is currently finishing the planning phase of our new treatment plant located at our main office location to filter out these substances from its water. This new treatment system will remove PFA's substances from three wells ensuring the best quality of water for our community, this will be constructed beginning early next year 2022. South Montebello Irrigation District will continue to provide the best quality of water to its customers as its top priority and will continue to monitor for these substances, please share this information with your neighbors.
